ABOUT US

KNOWLEDGE & EXPERIENCE

The doors we have been creating for you since 1998 are unique. They protect everything that is most precious to you, while also representing the place of your daily life. Therefore, it is important to choose the best possible doors that will meet all your requirements, both in terms of aesthetics and functionality.

Our doors are an exclusive product, created with attention to aesthetics, durability, and the natural environment for future generations. We strive to stand out not only with modern designs and meeting customer needs but also with social responsibility. Therefore, we take actions to combine modern machinery with the use of renewable energy sources. The energy needed for the production of our woodwork is largely obtained from our own wind farm and photovoltaic panels.

FOR YOU

THE HIGHEST QUALITY

Our doors always reflect your needs, preferences and expectations.

ENJOY OUR OFFER!

AGMAR doors are made from lumber sourced from forests with FSC certification.

This certification confirms compliance with the regulations of sustainable development, forest conservation, and nature protection.

CONSTRUCTION OF THE **PANEL ENTRANCE DOOR**

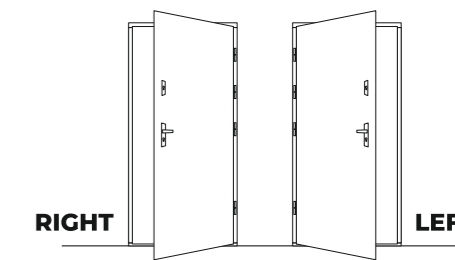

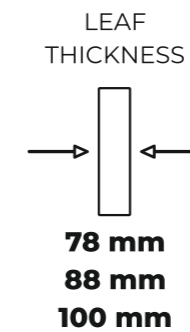

- | | |
|--|--|
| 1. Thermal insulation panel | 5. Anti-theft frame |
| 2. Reinforcing steel profile | 6. Three-plane adjustable hinge |
| 3. Pine frame made of glued laminated timber, reinforced with a steel profile | 7. 105x60 mm frame |
| 4. Seals | 8. Pine or oak sandwich panel |

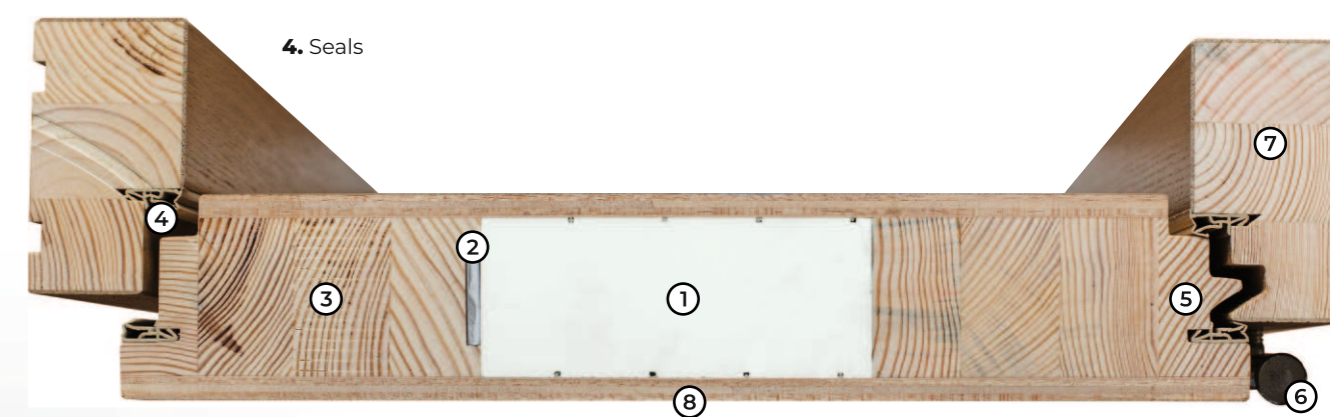

THE ENTRANCE DOOR, OPENING OUTWARDS
must be covered by canopies and possibly side guards.

THE ENTRANCE DOOR, OPENING INWARDS
must be completely covered with porches or other enclosures, or installed in undercuts.

CLEAR GLASS

BROWN REFLEX GLASS

LAKOMAT GLASS

STAINED FILM GLASS

BLACK LAKOBEL GLASS

VENETIAN MIRROR GLASS

SANDBLASTED GLASS

GRAPHITE REFLEX GLASS

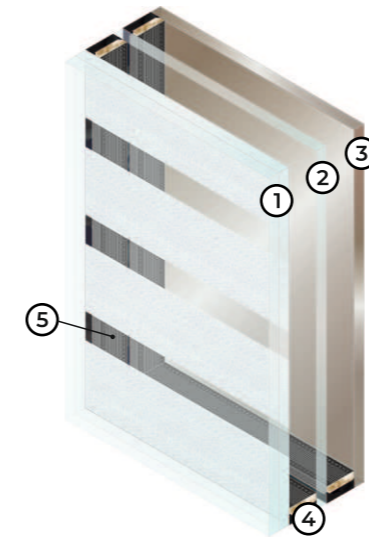

BLACK GLASS

In the entrance door, we use double-layer or three-layer composite glass inserts. It depends on the type of decorated glass. Our glazing technology is based in 80% on the warm edge system. It is a spacer of structural silicone foam made of extruded thermoformed polymer containing a moisture absorbent. It remains flexible over a wide temperature range, always returns to its original shape given in the hardening process and has a low deformation rate.

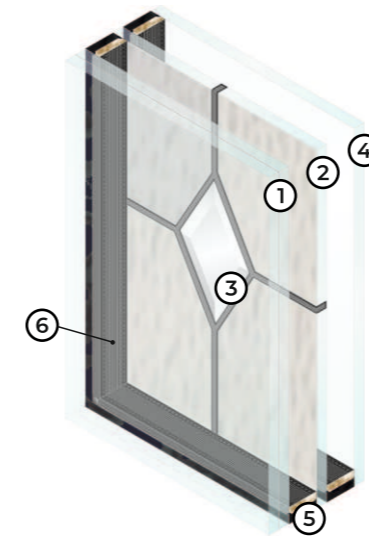

ADVANTAGES OF THE GLAZING UNIT

- Reduces the stress of the edge weld
- Increases thermal resistance
- Raises the temperature on the glass surface
- Increases resistance to condensation
- Improves sound absorption
- It is metal-free and has the highest degree of thermal efficiency of any insulating glass spacer system available today.

TWO-CHAMBER UNIT SANDBLASTED GLASS

1. Float glass or safety sandblasted glass (4 mm)
2. Float glass (4 mm)
3. Stopsol Brown Reflex glass (4 mm)
4. Hot Melt sealing compound
5. Glass combination, frame, warm RAL 9005

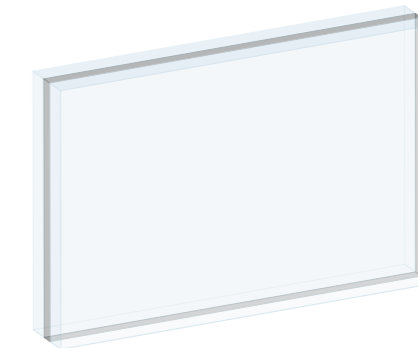

TWO-CHAMBER UNIT ENGLISH STAINED GLASS

1. Float glass or safety glass (4 mm)
2. Float glass with stained glass (4 mm)
3. Bevel glass
4. Float glass (4 mm)
5. Hot Melt sealing compound
6. Glass combination, frame, warm RAL 9005

SAFETY VSG GLASS

It is created as a result of the permanent glueing of two glass panes with a special foil. As standard, for VSG glass, two identical panes with a thickness of 2, 3, 4, 5 and 6 mm are used. Glass made of thicker panes is made on special order. The laminating film (PVB type) is 0.38 mm thick, a single film provides a basic level of security (P1 class). There are also VSG panes with a double foil with a total thickness of 0.76 mm (P2 class, with increased resistance) and with a quadruple foil, where the foil thickness is 1.52 mm (P4 class, recognized as an anti-burglary standard).

VSG GLASS IS

- **Anti-burglary** (the foil between the panes composed of several layers is extremely difficult to break)
- **Structural** (e.g. in case of glass breakage, it still holds the glass and prevents it from falling out)

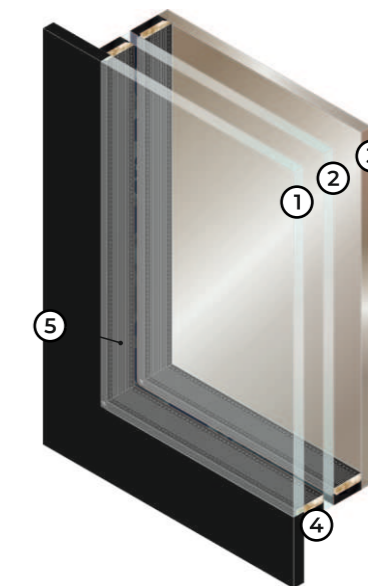

ANTI-BURGLARY P4 GLASS

1. Clear glass (4 mm)
2. PVB laminating film (0,38 mm x 4pcs.)

THICKNESS 6,38 MM VSG 3.3.1
• 2 panes 3 mm thick and 1 layer of foil

THICKNESS 8,76 MM VSG 4.4.2
• 2 panes 4 mm thick and 2 layers of foil

THICKNESS 9,52 MM VSG 4.4.4
• 2 panes 4 mm thick and 4 layers of foil

TWO-CHAMBER UNIT BLACK STAIR GLASS

1. Float glass with black painted stair glass (4 mm)
2. Float glass (4 mm)
3. Stopsol Brown Reflex glass (4 mm)
4. Hot Melt sealing compound
5. Glass combination, frame, warm RAL 9005

STANDARD COLOR PALETTE

FINISH TECHNICAL PARAMETERS

CARE KIT FOR EXTERNAL DOORS

It removes stains and dust, creates a layer that protects against dirt, refreshes varnished surfaces and gives them a silky shine. We recommend using the care system twice a year. After careful sanding, the surface can be recoated without any problems. Protect against frost. Shelf life in original packaging for at least 3 years.

Kit contents:

- ADLER Top-Cleaner 100 ml
- ADLER Door-Finish 100 ml
- Oil for the care and maintenance of fittings 20 ml
- 1 cleaning cloth
